

Marly ice rink

Professional lighting in the ice stadium is of major importance for players and spectators alike.

Customer/installation engineer:	Groupe E-Connect Le Mouret 300577
Stipulation:	Replacement of old lighting with powerful, constant LED lighting
Solution:	Illumination with TerraLED 200
Article:	151607
Quantity:	34
Equipment:	TerraLED 200
Areas of application:	Interior and outside illumination of production and warehouse buildings, as well as handling centres

Starting situation

The previous hall illumination of the Marly ice rink (FR) was not particularly effective. As a result of individual lights failing and the high level of energy consumption, a new method of illumination was sought. The optimal illumination of the hall and as low a level of energy consumption as possible were the requirements of the new illumination setup. With the TerraLED 200, we were able to cover both aspects successfully.

Customer benefits

- High efficiency & consistency
- Strong light output despite low energy costs
- Compact and modern design
- Dimmable
- No maintenance required
- Energy savings of up to 70%
