Introduction

MarkLED EXIT

Our product line of optical guidance devices is applicable in tunnels, roundabouts or on the road in general.

We have detailed information, documentation, certificates for our system MarkLED which we would be appreciate to send if you are interested.

Why optical guidance systems?

An optical guidance device improves recognition of lanes or obstacles, particularly during times of poor visibility (at night, fog, etc.) as well as vulnerable traffic areas such as tunnels, curves, roundabouts or traffic islands. The signals provide a very high degree of safety for traffic.

The system complies with current regulations (BAST Germany, FEDRO Switzerland e.g.) and are continous EMC-approved, which means, that the system functions with cables/wires and is non-inductive, so electromagnetic fields are excluded.

The wired systems are installed directly in the road surface. However, it is important that the installation area is not constantly driven over. Our recess-mounted lamps are compatible with all GIFAS systems. They complement each other ideally and require the same system components such as a control unit, feeder cable, etc.

All GIFAS systems can be dimmed across a continuous scale using the control unit or remote control.

Your advantages with this GIFAS system

- EMC-approved, no inductive interference
- quick and easy installation
- latest LED technology, very low power consumption
- vandal-proof, reinforced synthetic material/V4A Investment casting
- dimmable by control unit
- interoperable with all LED guidance systems
- modular construction, low-maintenance
- often set in systems in different applications
- thereby high product- and application know-how

Our services

- many years of know-how, experienced Project Managers
- individual advice, also on site
- large standard range, individual solutions possible
- expert advice on installation and bringing into service
- creating CAD documents, voltage drop calculations and tunnel disposals
- own service team with professional equipment and many years of know-how

MarkLED 4 - System

The MarkLED is a cable-guiding system with current carried through direct connections. This allows us to reach a very high efficiency factor (>80%) and to remain within the limits for electromagnetic compatibility (EMC). With the state-of-the-art LED technology, power consumption is so low that the desired line lengths can be usually realised without intermediate supply. The power consumption is extremely low because of the high energy efficiency. With those technical features we comply with regulations and expectation from public institutions and departments of international road engineering.

Upper part - the MarkLED light module

The top part is executed in an attractive and elegant form with a housing made of special transparent plastic. The outer surface is nano coated and antistatic for high dirt repellency. The electronics are installed from below and sealed with a neutral, white sealing compound. The brightness of the individual modes, such as dimming, blinking and flashing, are easily adjustable via the control units associated with the system and can also be influenced from the tunnel control centre or by overriding pulses.

Lower part - the current collector

The core of this system is the current collector. It transfers the power from the system cable to the light module and offers it a fixed base for mounting. The cable need not be cut and therefore, continues to be fail-safe. The light module comes preassembled on the current collector (fast and safe installation on site).

- 1. Placement of the system cable in prepared groove
- 2. Power transfer from the system cable to the light module
- 3. Mounting base for light module

System cable

For the LED guidance systems you need a system cable as a feeding line of every module.

Control unit

The new 4-channel control unit is used to control the GIFAS guidance systems. It can be integrated into existing control cabinets or also as a «stand alone» module.

Accessories

The diverse range of accessories allows different areas of application and fulfills complex customer requirements.

Functionality

The guidance systems have a wide voltage range between 16-48VDC. This allows to realise very long line distances. In addition, all systems are tested to meet IP68 protection. Thanks to the modular design, the individual components can be replaced quickly in case of service.

MarkLED 4 - Technology

Technical data

Set up: double-sided with 4 LEDs each

Light colours:

white: ~5'600 K
 green: 525 nm
 red: 625 nm
 yellow: 595 nm
 blue: 475 nm
 Light intensity: 65 cd (white)
 Operating life LED: L90/B10 100'000 h
 Protection category: IP68/IP69

Protection category: IP68, Protection class: III Impact protection rating: IK10

Operating voltage: 24 VDC (range 16-48 VDC)
Power consumption: 30 mA (double-sided LED white)
80 mA (double-sided LED colored)

Diameter: 110 mm

Height:

without current collector: 18 mmwith current collector: 20 mm

Material upper part: polycarbonate, colourless, nano coated, dirt-repellent

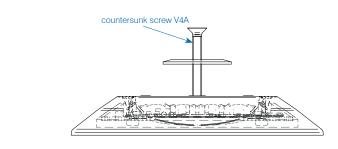

Material lower section: polyketone black, glass fiber reinforced System cable: system cable bipolar 2×2.5 mm²

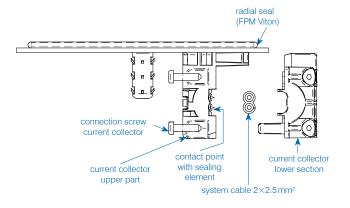

Temperature resistance: -40°C to +55°C

Axle load: to 5t (slow traffic with air-filled tyres)

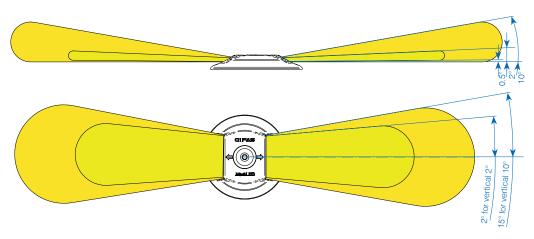

(i) Certificates, reference lists on request.
The MarkLED system meets the regulations of the Federal Road
Authority (e.g. BAST-Germany, FEDRO Switzerland).

Single components

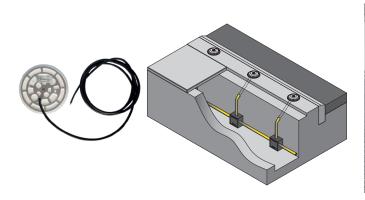

Scheme light emission

MarkLED 4 - Mounting possibilities

Example 1 - wired

By default, the MarkLEDs are connected with current collector in a milled groove in the shoulder. If this is not possible, a conventional strand cabling with junction boxes/sleeves can be realised. Here, a strand cabling with FE180 cable is installed and connected to a box/sleeve.

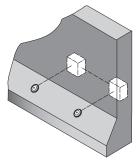

Example 2 - New Jersey profile

If the MarkLED has to be mounted on a New Jersey profile then there should be made a cross drill through the profile. On the backside a junction box can be set or inserted directly in a existing cable tray.

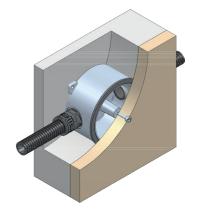

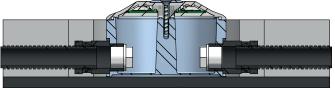

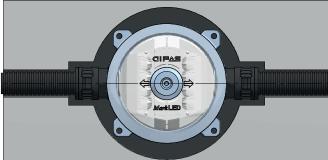

Example 3 - recessed-mounted

With the recessed-mounted box for MarkLED we can offer a robust and easy solution for a recessed installation of MarkLED. On both sides, hose connection are prepared for the connection of a protective hose.

MarkLED 4 - Mounting possibilities

Example 4 - surface-mounted (casing V4A)

A further possibility to mount the MarkLED is with surface-mounted solution. Here, the MarkLED is screwed onto a surface-mounted box, wherein the MarkLED has no current collector, but a direct outlet, which is connected to the feeding line in the housing.

Item no. 152744

Item no. 144534

Example 5 - surface-mounted (plastic adapter)

Simple and secure assembly of the MarkLED modules on the shoulder/wall by means of the surface monted plastic adapter.

surface-mounted adapter MarkLED 4 made off PA 6 BK40

surface-mounted adapter with guard plate (Item no. 208653)

860599 Drilling jig

Complete product module

System cable

The system cable MarkLED is a halogen-free EPR/EPR cable with tinned copper strands, high temperature resistance, bonding between the insulations of strands and the cable coating to increase water tightness.

Technical data

Material properties: halogen-free,

no toxic and corrosive gases
Fire behavior: low smoke emission, flame-retardant,

no fire spread, low fire load

Strand colors: red, dark blue
Nominal section: 2.5 mm²

 $\begin{array}{lll} \text{Exterior dimensions:} & 9.6\,\text{mm} \times 5.25\,\text{mm} \\ \text{Weight (kg/km):} & \sim 80\,\text{kg/km} \\ \text{Cu-Number (kg/m):} & 48\,\text{kg/km (48\,g/m)} \end{array}$

Temporary temperature

resistance: <10s: 200° C Fire class: 82ca-s1-d1-a1

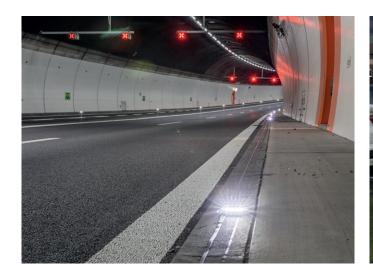

Assortment

115788	System cable light black – copper tinned flat cable EPR/EPR, 2×2.5 mm ²
148912	System cable light red – copper tinned flat cable EPR/EPR, 2×2.5 mm ²

MarkLED 4 - Applications

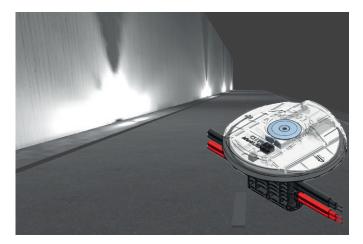

MarkLED EXIT - System

The MarkLED EXIT combines two tunnel safety lighting systems. It is a combination of guidance and escape route light, and the road studs (optical guidance system) are typically installed at distances of 12.5 m and 25 m respectively. The MarkLED EXIT is therefore equipped with two separate lighting areas with two different characteristics, usually installed at a distance of 25 m, using the same connection system, which in combination makes the system very economical.

In normal operation, only the part of the marker light (optical guidance system) is in operation. During an incident, the EXIT part is switched on so that the escape route is sufficiently lit. The MarkLED EXIT also has a wide voltage range of 18-48VDC. This allows lengths over 500 m..

Light module

The two lighting systems of the MarkLED EXIT are housed in the same size as the normal MarkLED 4. With the MarkLED 4, the MarkLED EXIT also shares the technology for the marker light (optical guidance system). The exact data of the marker light can be found on page 5.

The EXIT part has 4 high-power LEDs, emitting on both sides. They come with a special optical coating for safe lighting of escape routes. Optionally, the MarkLED EXIT can be installed in the shoulder or on the wall.

Current collector

It transfers the power from the system cable to the light module and offers it a fixed base for mounting.

The cable need not be cut and therefore, continues to be fail-safe. The light module comes preassembled on the current collector (fast and safe installation on site).

- 1. Placement of the system cable in prepared groove
- 2. Power transfer from the system cable to the light module
- 3. Mounting base for light module
- Integrated replaceable fuse inserts (micro-fuse 20×5 mm) for safety separation in case of fire.

System cable

The light system is connected by a double-guided system cable with a cross section of $2\times2.5\,\mathrm{mm}^2$. This cable is embedded in a groove in the shoulder in the case of floor mounting.

Control unit

The 4-channel control unit is used to control the GIFAS guidance systems. It can be integrated into existing control cabinets or also as a «stand alone» module.

The EXIT part can be powered directly via its own power supply, as it is operated with full brightness in the case of an incident and a control makes little sense.

Accessories

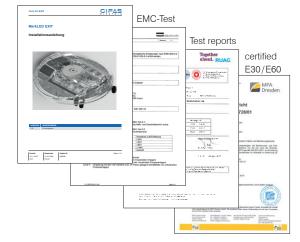

The diverse range of accessories allows different areas of application and fulfills complex customer requirements.

Functionality

The MarkLED EXIT is a system that can be used as a guidance in the tunnel as well as the actual escape route lighting. Corresponding sample installations have been created and tested in cooperation with FEDRO. The application must be checked carefully for each project, depending on the structural conditions.

The system MarkLED EXIT with functional maintenance E30/E60, tested according DIN EN 1363-1:2012-10 and based on DIN 4102-12.

Scheme light emission

MarkLED EXIT - Mounting possibilities

MarkLED EXIT used for escape route lighting

In the FEDRO 13015 guideline, the function of the escape route lights is defined as follows: In the case of an incident, it must be ensured that the escape route in the traffic area is sufficiently visually perceived. A separate fire escape route lighting is not required if this function can be taken over by the optical guidance system.

With this pioneering new development of the MarkLED EXIT, which combines the optical guidance system and the escape route lighting in one, a new dimension of economy is achieved. In this execution, a second light source with focused radiation is integrated into the proven guidance system. This is only activated in case of an incident and immediately reaches its full brightness.

The MarkLED EXIT modules are equipped with cold conductor monitoring (function monitoring of the EXIT area possible with the escape route lighting off).

Example: MarkLED EXIT on surface/recessed-mounted housing in standard mode Standard = optical guidance system

Example: MarkLED EXIT on surface/recessed-mounted housing in emergency event mode Emergency= escape route lighting switched on

Example 1: mounted on the floor

The luminaire is installed with the EXIT element in the direction of the wall when assembling the MarkLED EXIT on the shoulder (floor of the escape route).

Part of the light is projected directly on the escape route. A large part of the light is also reflected onto the shoulder via the wall. This guarantees that the escape route is adequately illuminated.

Example 2: mounted on the tunnel wall

The luminaire is installed with the EXIT element in the direction of the floor when assembling the MarkLED EXIT on the wall. A large part of the light is projected directly on the escape route.

Part of the light is also reflected onto the shoulder via the wall. This guarantees that the escape route is adequately illuminated.

MarkLED EXIT - Mounting possibilities

Example 4 - surface-mounted (casing V4A)

A further possibility to mount the MarkLED EXIT is with surface-mounted solution. Here, the MarkLED EXIT is screwed onto a surface-mounted box, wherein the MarkLED EXIT has no current collector, but a direct outlet, which is connected to the feed line in the housing.

MarkLED EXIT - Applications

System components - Control units

4-channel control unit

Remote control to 4-channel control unit

The control unit for all GIFAS systems is designed for 4 output lines. Each channel can be loaded with up to 10 A.

- Supply: a 230 VAC/24-48 VDC power supply device with a nominal output current of 40A is installed upstream from the control unit.
- Error messages: each channel has a relay with SPDT (potential free) assigned to the signaling of error messages.
- External blinking contacts: by default, two external flashing signals (24-60VDC) can be connected and transferred to the outgoing lines (synchronisation with flashing signal).
- Operating mode: the control unit has 8 or 31 different modes of operation.
- Failure rate: by failure rate detection, the lights can be tested for their functionality. The control unit measures the total power consumption of the respective channel. If the power consumption drops to a preset value, the fault message can be detected via a changeover contact (potential-free).
- Functions: one of the following functions can be assigned to each channel in each mode:
 - continuous lighting: 100%
 - dimming: adjustable from 1-99%
 - flash: adjustable from 0.1-9.9 Hz
 - lightning: adjustable from 1-99 ms
 - running light: running light direction, dimming 1-99%, light duty cycle 100ms-10sek, delay in lighting 100ms-10sek, switch-on delay 0-999sek, duty cycle 0-999sek
 - of
- Programming: the control unit can be optionally parametrised and read out via the web interface or the optionally available radio programming unit.
 - Web interface: if the control unit is connected to the network via RJ45 Cat. 6a, all parameters can be set and read out via a web browser.
 - Radio programming unit: the parameters can also be set by the radio programming unit.

Technical data

Input voltage: 18-48VDC

Supply current: 40A, 4 channels à 10A

Rated power max.: 1'920VA
Power supply: external
Protection category: IP65

Dimensions: 330×230×110 mm

Assortment

860594 4-channel control unit in cast aluminium housing, IP65,

18-48VDC/4 \times 10A, excl. power supply

Programming device with menu guide for set-up, programming and status recognition of the control unit. Communication with the control unit occurs through radio.

All necessary functions can be set up and assigned through the menu structure. No special knowledge is required to operate it. The connection between the control unit and the programming device is bi-directional, i.e. the current settings can be transferred from one to the other.

The buttons « Ω », « Ψ », « Ψ » and « \checkmark » are used to navigate the system. The range is approx. $3\,\text{m}$.

The menu is available in four languages: German, English, French and Italian..

Technical data

Operating voltage: 4.5 VDC, 3 batteries AAA

Radio frequency: 2.4-2.525 GHz

Life of battery: > 1 year in standby mode

Material: ABS
Protection category: IP40
Protection class: III

Dimensions: 73×140×32 mm

Assortment

860460 Remote control to 4-channel control unit

System components - Control units

Power supply to 4-channel control unit

Cold conductor monitoring

A power supply is installed upstream from the 4-channel control unit. The power supply is equipped with integrated protection against overloading and short-circuiting, with automatic or manual reset.

The power supply conforms to CEE regulations and also has UL and/or CSA approval.

Technical data

Input voltage: 230 VAC (range 100 - 240 VAC)

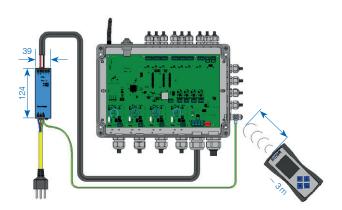

Output voltage: 24/48 VDC Output current: 10/20 A

Connections primary: screw terminals 4 mm² Connections secondary: screw terminals 4 mm²

Status display: LED green

Installation: quick fastening for DIN rail 35 mm
Protection category: IP20 (IP42 with additional cover)
Protection class: I
Dimensions: different, see designation below

(i) A detailed datasheet on the power pack is available on request

Assortment

163193	Power supply 230 VAC/24 VDC -10 A/240 W 39×124×117 mm
136629	Power supply 230 VAC/24 VDC - 20 A/480 W 65×124×127 mm
202595	Power supply 230VAC/48 VDC-10 A/480 W 48×124×127 mm
180867	Power supply 230 VAC/48VDC-20 A/960 W 125×124×127 mm

Other versions on request

The cold conductor monitoring is used for detecting defective installations or lights that are not connected. The monitoring is automatically activated as soon as the lights are switched off.

- Feeding: a power supply 230VAC/18-48VDC with a rated output current of max. 10A is connected upstream of the old conductor monitoring. The level of the output voltage of the power pack depends on the marking light used in this case.
- Fault signal: the cold conductor monitoring has two relays with change-over contact (potential-free) to signal fault messages for voltage interruption (for example, failure of the power supply unit) and exceeding of the failure rate (for example defect in the control unit installation).
- Functions: in every cold conductor monitoring, the threshold for the max. failure rate detection can be set individually in percentage. The adjustment range is 10-70% and can be adjusted in 10% increments
- Programming: programming is done directly via the programming buttons on the control board or via the 4-channel control unit..

Technical data

Input voltage: 18-48VDC
Supply current: 10 A
Rated power max.: 480 VA
Power supply: external
Protection category: IP66

Dimensions: 160×100×80 mm

Assortment

860603 Cold conductor monitoring in cast aluminium housing, IP65, 18-48VDC, 10A, excl. power supply

System components - Mounting

Junction boxes

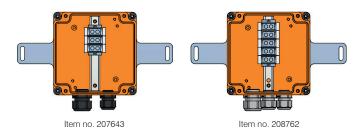

Joint profile

The safety cable must be connected from control center to the GIFAS system cable when connecting the signal units to the infrastructure. A special junction box is required for these connections. This can be installed in the cable trunks in the tunnel shoulder or at another suitable point. An E30/E60 junction box is usually required for this application.

The size of junction box depends on the feed-in cable used as well as the number of outlets.

Assortment

207643	Junction box FE180/E30 type 1616 orange polyester fibre,
	IP66/68, 3×6 mm ² , IP66/68 – OLE feed-in cable Ø13-18 mm
	 1 outlet system cable

208762 Junction box FE180/E30 type 1616 orange 160×160×100 mm, 5×6 mm², IP66/68 − OLE + FWB feed-in-cable Ø 13-18 mm − 2 outlet system cable The milled groove of the optical guidance system must be sealed against environmental conditions. A simple and low-cost solution is to use the halogen-free GIFAS joint profile made of EPDM. This is inserted in the slot. It is self-locking and available in three different widths. A stable and smooth slot with slot widths of 6 -16 mm is the prerequisite for use.

Technical data

Material properties: halogen-free, no corrosive and toxic gases

Shore hardness A: 70° ±5%
Special weight: 1.23 kg/l
Elongation at break: 237% DIN 53504
Breaking stress: 11.2 MPa DIN 53504

Item no. 116753

Exterior dimensions: 9.3 mm×17.1 mm
Groove width: 6-8 mm
Nominal section: 89 mm²

Weight: 89 mm²
109 kg/km

Item no. 140862

Exterior dimensions: 14.5 mm×17.1 mm

Item no. 155809

Exterior dimensions: 17.35 mm×17.5 mm

Groove width: 14-16 mm Nominal section: 171 mm² Weight: 254 kg/km

Installation material - Protective hose

Depending on the type of installation, the system cable can also be conducted in an installation tube.

Assortment

035976	Installation tube Ø25/19 mm, flexible (selling unit = 100 m)
128266	Corrugated hose PA6, Ø21.2/16.5 mm, flexible, (selling unit=50 m), UV resistance, operating range of temperature -40°C to 120°C, temporarily over 150°C

Assortment

116753	Joint profile EPDM 70° Shore for groove 6-8 mm, 9.3×17.1 mm, black
140862	Joint profile EPDM 70° Shore for groove 10-12mm, 14.5×17.1mm, black
155809	Joint profile EPDM 70° Shore for groove 14-16mm, 17.35×17.5mm, black

System components - Mounting

Sealing compound

Adhesive and sealant

The recommended sealing compound is heated to 160°-180°C while being constantly mixed. The compound is applied using a spouted container or grouting lance. Excess compound must be removed by scraping once it has fully cooled.

The current collector is glued to the base with the help of the sealant and adhesive. Our adhesive is a single-component adhesive that vulcanises itself into an elastic compound as it reacts to the air humidity. It also has no silicone or solvents.

Technical data

Colour: black

Form of delivery: 1 box with 24 cubes of 700 g each

Sealing temperature: 160°C-180°C Weight per unit volume: 1.2g/cm³

Assortment

208907 Hot/liquid/bitumen sealing compound TOK-Melt N2

Technical data

Basis: MS-Polymer

Cross-linking system: polymerisation through air humidity

Temperature resistance: -40° C to $+90^{\circ}$ C Processing temperature: $\sim +5^{\circ}$ C to $+30^{\circ}$ C pebble gray

Processing: using a hand spray gun cartridge of 290 ml

Assortment

020157 Adhesive and sealant hybrid pebble grey, 290 ml

Permafix 1153

Guard plate

Screw/nylon dowel

During the winter months, when snow ploughs touch the light modules when entering and exiting tunnels, units are sheared off and need to be replaced. However, this can be prevented by using a protective plate in V4A quality. It is sufficient to equip the first MarkLED i1 at the tunnel entrance and exit with this protective plate.

Assortment

024446	Guard plate V4A to MarkLED, 190×150×24 mm
208653	Guard plate V4A to surface-mounted adapter 245×150×43mm
024676	Countersunk screw V4A with I-6Kt. without shaft M8×70 mm
024677	Anchor nylon M8-S×50 mm
019180	Anchor nylon Ø6×35mm (without rim)
019290	Chipboard screw, countersunk head, V4A, Ø5×80/50 mm

For mounting e.g. 860598/860604

Assortment

211986	Screw A4-5.0×80mm Torx T25 (PU=200)
019180	Anchor nylon Ø6×35mm (without rim)
